## Intelligent security and automation management

Superior KeyPad TouchScreen Fibra is designed for intuitive and convenient system control. Its graphical interface, sound notifications, and LED indication ensure that user commands and system responses are delivered without fail. Users can view the latest alarms and events directly on the keypad to stay informed about recent system activity. If a malfunction is detected during the integrity check, the keypad clearly indicates the cause. This way, users are always aware of the system state and any actions to be taken.

## Key features

- Easy security group management
- Control tab for automation devices with toggles indicating the current device state<sup>1</sup>
- Sound and LED indication for alarms, opening doors (Chime), entry/exit delays, and other events
- Activation when a user approaches the device and during entry delays
- Automatic backlight brightness adjustment
- On-screen notification specifying the cause of a malfunction when arming the system
- Log with the recent system events available directly from the keypad screen

## Three fast and secure authentication methods

Pass card or Tag key fob

Smartphone

Codes

## ⚠ All set in case of emergency

- Auto-locking in case of an attempt to guess the code
- Duress codes to simulate system disarming while sending a silent alarm to the security company
- Protection against authentication via unauthorized access devices
- Three emergency buttons: panic, fire, and auxiliary alert

## Sabotage protection

- Tamper alarm
- Protection from short circuit
- Device authentication to prevent spoofing

## Fibra communication technology

- Up to 2,000 m (6,550 ft) of wired connection range<sup>2</sup> between the keypad and the hub
- Encrypted communication
- Regular polling to display current device states
- Connecting with 4-core signal or 8-core U/UTP cables
- Support for connecting different types of devices to a single line

## Easy setup and configuration

- Installation on the SmartBracket mounting panel without disassembling the enclosure
- Pairing with an Ajax hub via automatic Fibra line scanning or QR code
- Remote configuration and testing via mobile and desktop Ajax apps
- Automatic device self-diagnosis with status reporting
- Instant maintenance notifications
